New Jersey ECONOMIC INDICATORS

THOMAS H. KEAN, Governor
State of New Jersey

SEPTEMBER 1987

CHARLES SERRAINO, Commissioner
New Jersey Department of Labor

New Jersey ECONOMIC INDICATORS

Number 275 Based on data available through August 28, 1987

The Economic Situation in the Nation and the State..... 2

Comparisons of Economic Trends
New Jersey and the United States..... 6

Statistical Section..... S-1

New Jersey Economic Indicators is published monthly and distributed without charge, to those wishing to receive it, by the New Jersey Department of Labor, Division of Planning and Research, C N 056, Trenton, N.J. 08625-0056. It is prepared with the cooperation of other State and Federal agencies. Material appearing here may be reprinted without permission, but it would be appreciated if appropriate credit was given.

THE ECONOMIC SITUATION IN

The Nation

A number of key indicators of the nation's economic pace recorded sizeable gains in July, including industrial output, starts of single-family homes and retail sales. This was accompanied by a further decline of unemployment to 6.0% of the civilian labor force and somewhat slower price increases than had occurred earlier in the year, with producers' prices for finished goods climbing at an annual rate of less than 3% for the second month in a row. This good news was tempered, however, by a further weakening of apartment house construction, continued sluggishness of investment in commercial and industrial facilities, and a surge of imports that raised the international trade deficit to a record $39.5 billion for the second quarter.

Industrial production advanced by 0.8% in July, with across-the-board increases for business equipment, consumer goods, industrial materials, construction supplies and defense and space equipment. Auto assemblies and output of household durables slipped, reflecting the softening of consumer demand for big ticket items, but more than compensating gains were recorded by manufacturers of clothing, food products and other nondurable goods. Total industrial output was up 3.9% from the same month last year, after showing no real growth at all during the preceding 12 months. Factory jobs were up 158,000 over the same period, reversing their decline of 1985 and early 1986 but far from recouping the losses that occurred during the the last recession.

Starts of new single-family homes turned up in July, following a four-month decline attributed by industry analysts to rising mortgage interest rates. This was largely offset however, by a further deterioration of planned apartment units, leaving total housing starts essentially unchanged at a lackluster annual rate of 1.6 million (compared with 2 million a year and one-half ago). Prospects for single-family home construction are clouded by uncertainties over the likely behavior of interest rates, but some further rebound is possible if borrowing costs remain stable or rise only moderately. The

outlook for multi-family projects, for which starts have declined steeply since early 1986, is less promising because of the persistence of high vacancy rates across much of the country and especially in the Sunbelt.

Retail sales increased by 0.8% in July to an annual rate of nearly $128 billion, thanks in part to a pick-up of spending on new cars, furniture and building materials from its sluggish pace of earlier in the year. The magnitude of July's increase surprised many analysts, most of whom continue to expect consumer spending to grow at only a moderate rate during the period ahead because of the heavy debt burden currently being carried by the nation's households. A one-month surge in this volatile statistic is not enough to warrant reconsideration of this prognosis.

Though consumer spending is expected to remain less buoyant than during the 1983-1986 period of explosive borrowing, business analysts are still counting on the consumer to help keep the economy on an upward course during the balance of 1987 and into 1988. They are also looking for improvement in the nation's balance of trade in belated response to the drop in the exchange value of the dollar and additional recovery of business investment in equipment for modernization and productivity enhancement. Sluggishness is expected to persist in multi-family home construction and investment in new office, commercial and industrial capacity, but expansion in other sectors is widely expected to be sufficient to support a 2 1/2% to 3% overall economic growth rate and keep unemployment near the 6% level.

The State

The New Jersey economy entered the second half of 1987 in basically sound health, except for the continued erosion of jobs in the manufacturing sector and some indications that the homebuilding boom may be losing its momentum. Unemployment has been at a peacetime low of 4% since January, business failures have been sparse and considerable confidence in the future continues to be exhibited by investors in office, commercial and other nonresidential development. Employment growth has paused in the services sectors over the past several months, but this appears to be more the result of labor supply constraints than of any significant easing of the demand for labor in these industries.

According to the latest survey of employers conducted by the N.J. Department of Labor, nonfarm wage and salary employment edged down by about 5,600 in July, after adjusting for vacation shutdowns in manufacturing, summer-time school closings and normal seasonal hiring by construction contractors, financial institutions, hotels, fast food outlets, recreational facilities and other service industries. This was the third consecutive month during which nonfarm employment fell short of seasonal expectations, with the result that--on a seasonally adjusted basis--it slipped from a record 3,570,300 in April to an estimated 3,560,300 as of mid-July.

The recent slippage of nonfarm jobholding closely resembles what happened during the same period last year and should not be interpreted as an indication that the impressive employment expansion of the past several years has come to an end. Employment actually increased by about 63,000 between April and July before adjusting for season variations. The 10,000 decline on a season-

ally adjusted basis simply means that a larger increase would have occurred if historical seasonal patterns had prevailed. Historical seasonal patterns have not prevailed during the past two years, however, at least partly because of the reduced availability of youth to satisfy the needs of seasonal employers during periods of peak load demand.

Though labor market tightness will continue, the special problems of seasonal employers will diminish after Labor Day and the underlying strength of the demand for labor will once again be reflected in a rising employment trend. This is what happened last year, when jobholding climbed steeply during the autumn and winter months after pausing during the spring and summer. As a result, nonfarm employment increased by nearly 93,000 over the 12 months ending in July, with gains of more than 78,000 in the service sectors, 15,000 in construction and 9,000 in government overshadowing an over-the-year loss of about 10,000 jobs in manufacturing.

Manufacturing remains the only significant weak spot in New Jersey's otherwise robust economy, with employment dropping in July for the sixth month in a row in disturbing contrast to an upturn at the national level over the same period. The factory job loss since January totals 16,100, enough to wipe out what little improvement started to occur during the latter part of 1986 and drop the state manufacturing employment rolls to 125,000 below what they were prior to the recessions of 1980 and 1981-82.

This year's manufacturing job losses have been mostly in apparel, machinery, electrical equipment, fabricated metal products, primary metals, scientific and professional instruments, toys and novelty goods, and stone, clay and glass products. Some of these industries were expected to start benefiting by now from the declining foreign exchange value of the dollar, which appears to have already given at least some boost to manufacturing activity nationally. Though the impact of the cheaper dollar is apparently lagging in New Jersey, it is still expected to have a beneficial effect on factory orders and should help stem if not reverse the downtrend of employment in this sector before long.

In marked contrast to New Jersey's laggard performance in the industrial sector, the Garden State continues to enjoy a construction boom of unprecedented proportions. Construction jobs have increased by more than 60,000 over the past four years and appear to have plateaued at a record seasonally adjusted high of about 167,000 to 168,000 since early spring.

As for the future, prospects remain extremely favorable for nonresidential building and heavy engineering projects, such as highway construction and other infrastructure development. Contract awards for nonresidential building totaled $1.6 billion during the first half of 1987, up 23% from a year earlier, and awards for heavy engineering projects totaled $576 million, an over-the-year increase of 14%.

Homebuilding indicators, on the other hand, show some recent signs of weakness, particularly in the single-family home segment, for which building permits declined 9.5% from the first six months of 1986 to the first half of 1987. This does not appear to have yet affected the current level of building activity, which is still being buoyed up by the heavy volume of projects initiated last year and during the winter. The reduced volume of new projects could become a negative factor later this year or in 1988, however, if it persists.

New Jersey continues to outshine many other parts of the country when its well-being is assessed on the basis of two of the major indicators of economic distress: the unemployment rate and the rate of business failures. With regard to unemployment, the state's jobless rate was just 4% in July, a full two percentage points below the national average and the lowest of all of the 11 largest industrial states except Massachusetts. As for business failures, bankruptcies totaled only 419 in New Jersey during the first half of 1987, a drop of 14% from a year earlier. This follows a decline of 8% from 1985 to 1986. In contrast, business failures across the nation

increased by 7% in 1986 and by another 7% during the first half of 1987.

Expansion of the New Jersey economy should continue during the period ahead and unemployment should remain at or near 4% for as long as the national economy manages to sustain its rising course. Job growth will once again be evident starting in September. The rate of increase will be slower than in recent years because of labor supply constraints and most of the state's employment gains will be concentrated in business services, finance, trade, medical care and other service-producing activities. Construction activity should remain at a high level, except for some potential easing of homebuilding, and manufacturing should show at least some improvement in response to the more favorable international trade situation.

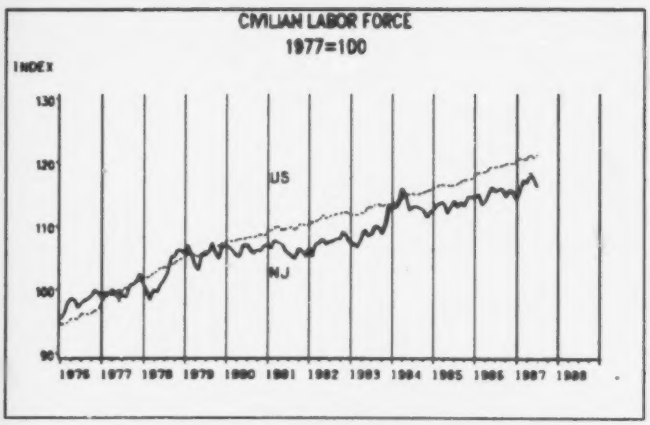
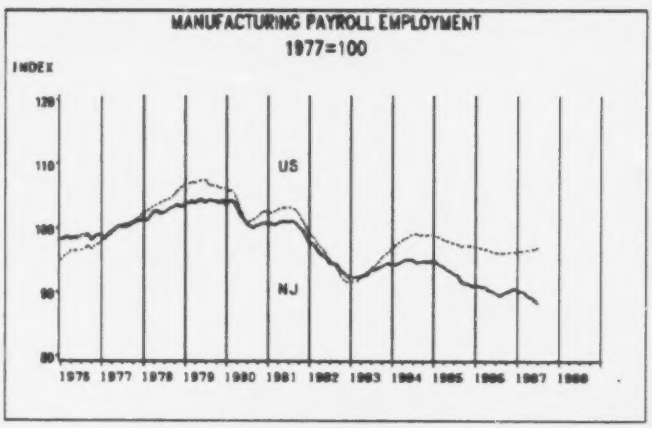
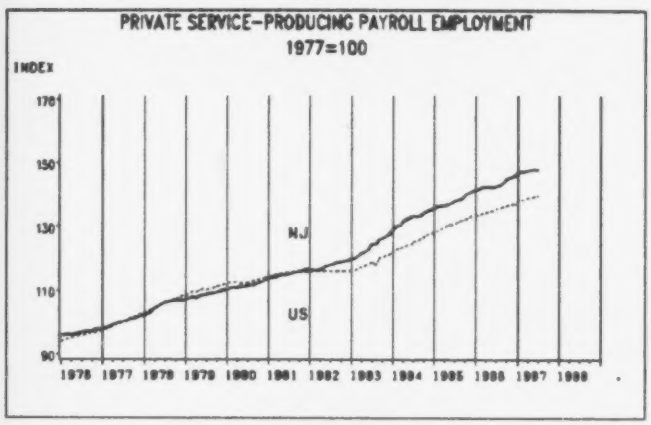
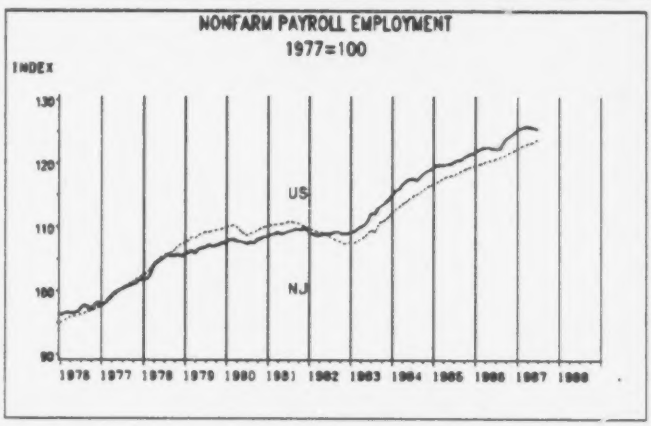
INA-Information Not Available

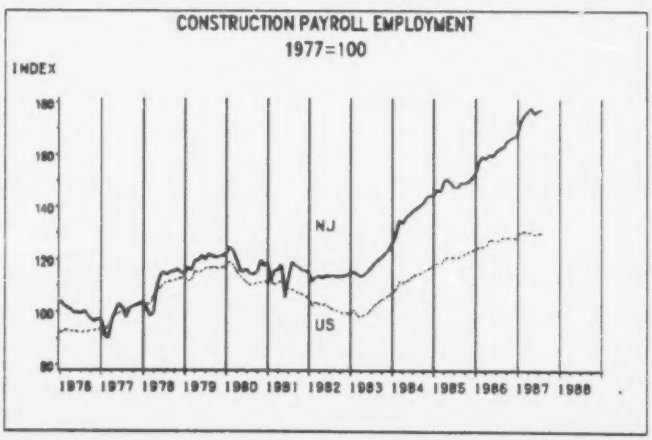
Comparisons of Economic Trends In New Jersey and the United States



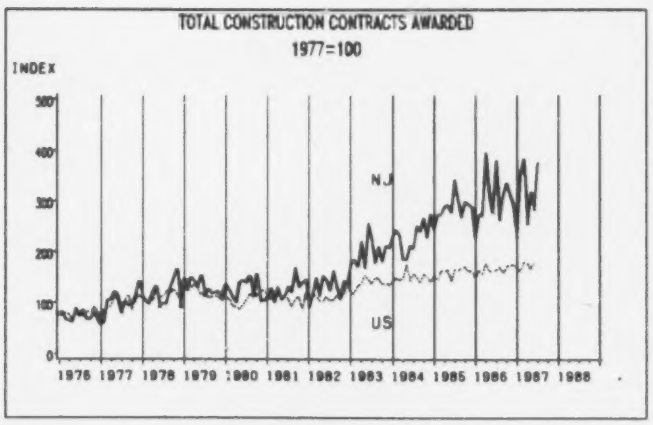


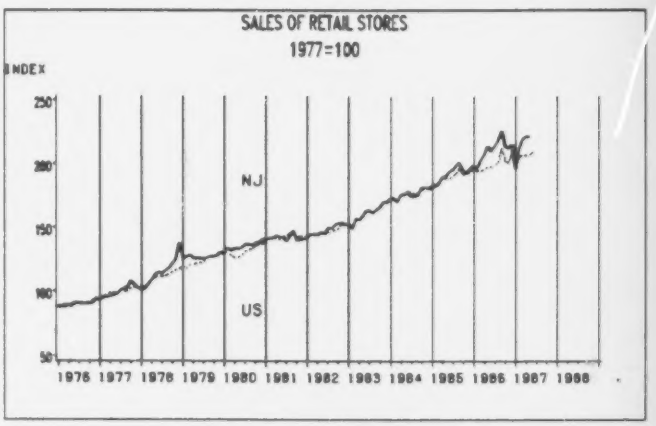


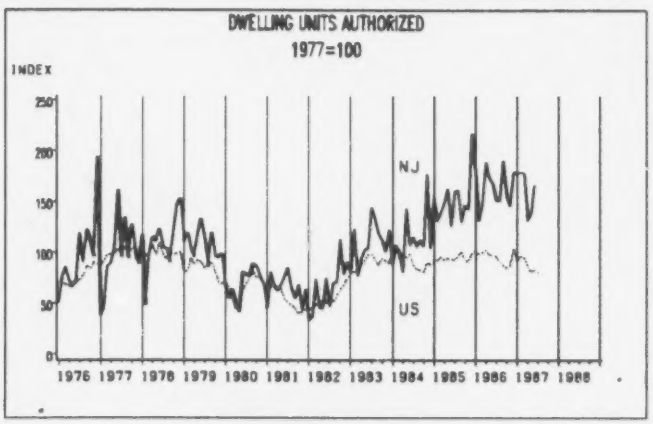


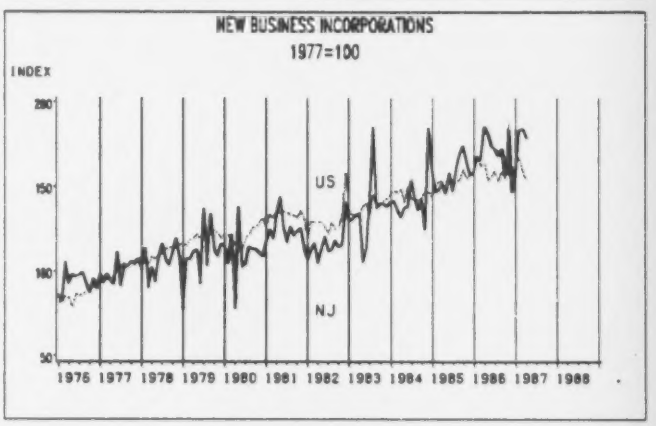


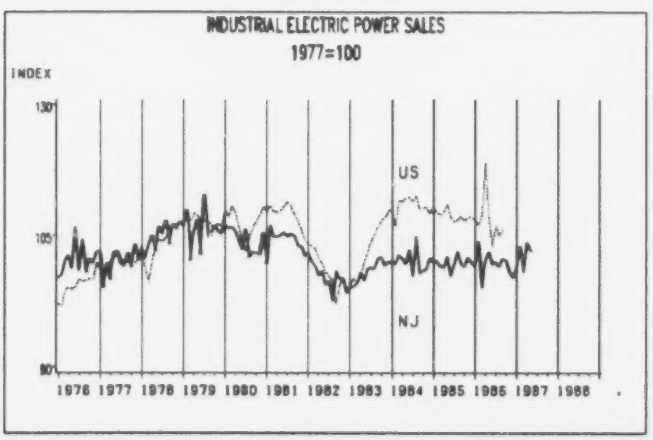
All data in the charts on these two pages have been seasonally adjusted and indexed to a 1977 base with one exception. Data on the unemployment rate is presented in actual units. The advantage of using an index is that it facilitates comparisons between the State and the Nation. The data for retail sales in New Jersey have been adjusted to take account of sample revisions that caused breaks in the series.

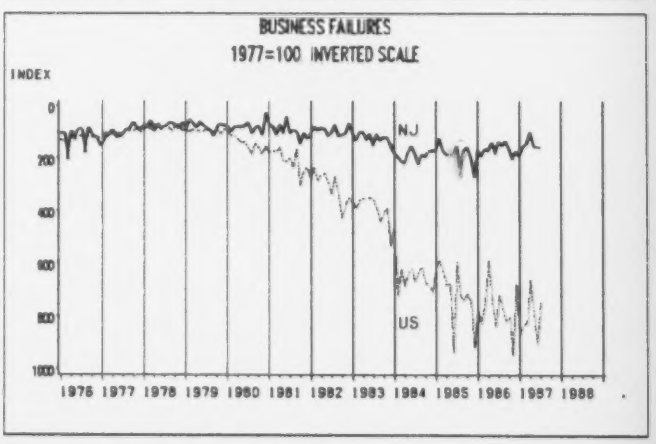












STATISTICAL SECTION

Please Note:

Each year the data series in *Economic Indicators* are revised using new benchmarks and seasonal adjustment factors. For this reason, it would be incorrect to generate an historic time series for *Economic Indicators* data by taking old issues of the *Economic Indicators* and tying the series together.

SEASONAL ADJUSTMENT OF DATA

All charts, except charts I and II and where otherwise noted, contain data seasonally adjusted by the X-11 variant of the U.S. Census Bureau program.

Data for 1975 and subsequent years in charts I and II have been seasonally adjusted using the ARIMA (Auto-Regressive Integrated Moving Average) method of seasonal adjustment developed by Statistics Canada.

For those series which are affected by the occurrence of five rather than four of a particular day of the week, during the course of a month in any given year, a statistical adjustment known as "trading day" has been made.

TABLE NOTES

Preliminary and revised data are indicated by a "p" or "r" after the entry.

CHART NOTES

Unless otherwise noted, all graphs were developed with seasonally adjusted data. Some series were plotted with the following variations noted on the graph itself:

Moving Averages. Series where the monthly data vary erratically have been plotted with moving averages and with nonaveraged data superimposed for the most recent years.

Ratio Scales. Where ratio scales were used to show constant rates of change as straight lines, this has been noted; otherwise, the graph is on an arithmetic scale.

Inverted Scales. For series where declines are associated with economic expansion (such as unemployment and business failures) an inverted scale has been used and noted.

Since the scale of each series is determined by the volume and trend of the data time series, caution should be exercised in making comparisons among charts.

MONTHLY AVERAGES

On page S-37 are the monthly averages of the series data for recent years to be used as a benchmark for evaluating current monthly data.

SHADED AREAS

Periods identified by the National Bureau of Economic Research (NBER) as ones of general national contraction have been shaded. They include the periods December 1969-November 1970, November 1973-March 1975, January 1980-July 1980 and July 1981-November 1982.

28-29	US Bureau of the Census
30	R.L. Polk and Company
31-36	NJ Department of Labor Division of Planning and Research

SERIES NOTES

1-6 The RESIDENT LABOR FORCE INDICATORS are estimated by two different methodologies. The **official series** is based on the U.S. Bureau of Labor Statistics (BLS) monthly survey of some 2,730 New Jersey households. The **unofficial series** is based on a combination

of unemployment insurance claims, employer survey data, estimating formulas, and household survey benchmarks.

Both data series are based upon population estimates and weights derived from the 1980 U.S. Census of Population.

Official series data have been adjusted to 1986 population estimates produced by the U.S. Bureau of the Census.

Unofficial series data have been adjusted to a 1986 benchmark.

The LABOR FORCE PARTICIPATION RATE and the EMPLOYMENT/POPULATION RATIO (Series 4 and 5) are expressed as percentages of the civilian noninstitutional population aged 16 years and over.

The New Jersey Department of Labor (NJDOL) agrees to publish the BLS approved estimates of labor force, employment, unemployment and unemployment rate for the State and all published areas, and agrees to label these data as the data used to allocate federal funds and determine eligibility for federal assistance programs. NJDOL reserves the right to publish alternate labor force and unemployment data for State purposes and will suitably label such data so as to distinguish them from the BLS approved series.

7-12 The ESTABLISHMENT EMPLOYMENT INDICATORS are generated from a monthly survey of employers on the number of persons who worked or received pay for any part of the pay period including the 12th of the month. The series are adjusted to March 1986 benchmarks and reflect the 1972 SIC (Standard Industrial Classification Manual) changes. See footnote on page S-29 for additional information in estimating state government employment.

PRIVATE SECTOR NONFARM PAYROLL EMPLOYMENT (Series 8) is computed by subtracting government employment from total nonfarm payroll employment.

SERVICE-PRODUCING INDUSTRIES PAYROLL EMPLOYMENT (Series 12) includes the industries of trade, services, finance/insurance/real estate, and transportation/communications/public utilities.

13 MANUFACTURING EMPLOYMENT - PRODUCTION WORKERS is developed from a monthly survey of employers on the number of nonsupervisory employees in the manufacturing sector who worked during or received pay for any part of the pay period including the 12th of the month. The series are adjusted to 1986 benchmarks and reflect the 1972 SIC changes.

14 MANUFACTURING WORKWEEK - PRODUCTION WORKERS is derived from a monthly survey of employment and earnings. The workweek is estimated by dividing AGGREGATE MANUFACTURING WEEKLY MANHOURS BY MANUFACTURING EMPLOYMENT - PRODUCTION WORKERS.

15 AGGREGATE MANUFACTURING WEEKLY MANHOURS - PRODUCTION WORKERS are estimated from a monthly survey of the manhours worked by manufacturing production workers.

16 WEEKLY EARNINGS OF MANUFACTURING PRODUCTION WORKERS are affected by premium pay, shift differentials, piecework and incentive payments, length of workweek, and other factors. Data are not seasonally adjusted.

17 The CONSUMER PRICE INDEX (CPI) measures the change in prices of a fixed market basket of goods and services purchased by urban workers. The index represents price changes for everything people buy for living--food, clothing, automobiles, homes, furnishings, fuel, drugs; fees to doctors, lawyers, and beauty shops; and rent, repair costs, transportation fares, public utility rates, etc. All taxes (sales, excise, real estate, etc.) directly associated with the purchase and continued ownership of an item are included in the price. Income and other personal taxes not associated with prices of specific goods are excluded.

The data series reproduced in the report are the **Urban Wage Earners and Clerical Workers** series (CPI-W).

CPI-W is based on urban consumer units where more than one-half of the income is earned from clerical or wage occupations. In addition, one of the members must work for 37 weeks or more in an eligible occupation. The CPI-W population represented 30 percent of the total United States population in 1981.

The U.S. CPI is the **U.S. City Average.**

The N.Y. CPI is for the **New York, N.Y.-Northeastern New Jersey** area which includes in New Jersey: Bergen, Essex, Hudson, Middlesex, Morris, Passaic, Somerset, and Union counties; and in New York: New York City, Nassau, Rockland, Suffolk, and Westchester counties.

The Phila. CPI is for the **Philadelphia, Pa.-New Jersey** area which includes in New Jersey: Burlington, Camden, and Gloucester counties; and in Pennsylvania Bucks, Chester, Delaware, Montgomery, and Philadelphia counties.

Questions on the use of the CPI should be addressed to the U.S. Bureau of Labor Statistics offices in New York City (212) 944-3121 or in Philadelphia (215) 596-1154.

THERE IS NO NEW JERSEY CONSUMER PRICE INDEX NOR COST-OF-LIVING INDEX.

18 NET SPENDABLE EARNINGS are calculated by adjusting gross average weekly earnings for the effects of state and federal taxes and inflation. Federal tax adjustments are made by the New Jersey Department of Labor according to a formula previously developed by the U.S. Department of Labor. Inflation adjustments are based on the average

Consumer Price Index for Urban Wage Earners and Clerical Workers in the New York-Northeastern New Jersey and the Philadelphia-New Jersey areas. The data are not seasonally adjusted.

20 Business failures data beginning with January 1984 are not comparable to those prior to that date due to coverage of industries not previously included. Beginning in January 1984, all industries are included in the data.

21 Beginning with the February 1987 issue of the **Economic Indicators**, data on total electric power sales have been replaced by industrial electric power sales. Industrial electric power sales are estimates of total sales of electricity by utilities to industrial users only. They are based on a sample of utilities surveyed by the U.S. Energy Information Administration, as reported in **Electric Power Monthly** (DOE/EIA-0226).

22-24 The CONSTRUCTION CONTRACTS INDICATORS are proprietary data provided by special permission of the F.W. Dodge Division, McGraw-Hill Information Systems Company.

The cumulative data presented in the table on page 3 are not the sum of the data contained in series 22, 23, and 24. The cumulative data contain retroactive revisions made after the monthly data were originally published. The monthly data have not been revised.

TOTAL CONSTRUCTION CONTRACTS AWARDED (Series 22) is the sum of seasonally adjusted residential and nonresidential construction contract awards and unadjusted nonbuilding construction contracts awards. The nonbuilding component does not exhibit a stable seasonal pattern.

25-27 The RESIDENTIAL BUILDING PERMITS INDICATORS are compiled as of the fifth day of the second following month and are not revised as subsequent reports are received. Since the reports from all New Jersey municipalities are never received by the cutoff date, preliminary figures are used for both the current and the historical series in order to ensure comparability. Final monthly data incorporating late reports appear in the annual summaries of **New Jersey Residential Building Permits,** published by the Division of Planning and Research.

TOTAL PRIVATE DWELLING UNITS AUTHORIZED by building permits (Series 25) data is the sum of seasonally adjusted single-family and two-family dwelling units and unadjusted three-or-four family and multi-family dwelling units. Public housing units are not included in either the New Jersey or U.S. series and represent a tiny fraction of the total.

DWELLING UNITS (5 OR MORE) AUTHORIZED BY BUILDING PERMITS (Series 27) include all multifamily structures with five or more units, except those in public housing. Data do not exhibit a stable seasonal pattern and are therefore not appropriate for seasonal adjustment.

28-29 The figures prior to 1970 for SALES OF RETAIL STORES were adjusted by the New Jersey Department of Labor to account for sample revisions introduced in 1968 by the U.S. Census Bureau.

SALES OF RETAIL STORES IN 1967 DOLLARS (Series 29) has been deflated by the "commodities only" component of the average New York-Northeastern New Jersey and Philadelphia-New Jersey **Consumer Price Index for All Urban Consumers.**

30 New passenger car registrations data are total new passenger cars registered in New Jersey, regardless of the State in which the sales occur, and include both domestically produced as well as imported vehicles.

Because of unemployment insurance coverage and other law changes affecting eligibility for benefits, data on unemployment insurance claims (Series 31-36) may not be directly comparable between years.

31 WEEKS CLAIMED (WEEKLY AVERAGE) is computed by dividing the total number of weeks claimed (intrastate and interstate agent under Regular UI program only) in the month by the number of weeks in the month.

The INSURED UNEMPLOYMENT RATE (IUR) is the seasonally adjusted weekly average of claimants (intrastate and interstate agent claims under the regular state program only) as a percent of the estimated covered employment.

32 The INITIAL CLAIMS WEEKLY AVERAGE represents intrastate and interstate agent claims under the regular state UI program only.

33 The UNEMPLOYMENT INSURANCE EXHAUSTIONS are from the regular state program only.

34-36 The industry INSURED UNEMPLOYMENT data are derived from a three percent sample of all claimants under the regular state unemployment insurance program. The data reflect the number of insured unemployed during the week generally containing the 12th of the month, although the data are a count of the claims filed during the subsequent week.

INSURED UNEMPLOYMENT IN SERVICE PRODUCING INDUSTRIES (Series 36) includes the industries of transportation/communications/public utilities, trade, finance/insurance/real estate, and services.

Data on insured unemployment in manufacturing and service-producing industries consist of the sum of the seasonally adjusted or unadjusted data for the respective industry components. The decision to seasonally adjust the component industries is based upon individual consideration of the industries and whether seasonal adjustment is statistically meaningful.

* THE TOTAL NUMBER OF STATE EMPLOYEES REPORTED UNDER THIS HEADING IS DETERMINED ON THE BASIS OF A DEFINITION DEVELOPED BY THE U.S. BUREAU OF LABOR STATISTICS WHICH IS STANDARDIZED THROUGHOUT THE NATION. THE DEFINITION INCLUDES BOTH FULL- AND PART-TIME WORKERS IN THE EXECUTIVE DEPARTMENTS, THE LEGISLATURE, AND THE JUDICIARY, AS WELL AS ALL EMPLOYEES OF AUTHORITIES, COMMISSIONS, THE STATE UNIVERSITY AND OTHER AGENCIES NOT INCLUDED ON THE CENTRAL STATE PAYROLL

** THIS SUB-CATEGORY OF STATE GOVERNMENT EMPLOYMENT IS LIMITED TO FULL-TIME EMPLOYEES OF THE EXECUTIVE DEPARTMENTS, THE LEGISLATURE, AND THE JUDICIARY. THE FIGURES ARE BASED ON THE CENTRAL STATE PAYROLL AND ARE PROVIDED BY THE DEPARTMENT OF TREASURY.

NEW JERSEY'S NONFARM PAYROLL WORKERS BY MAJOR INDUSTRIES, 1958-1986

* Data from 1972 forward are not precisely comparable with earlier figures because of SIC revisions. The revisions caused noticeable changes between the original and revised 1972 averages such as lumber (+700), furniture (-500), rubber (+2,000), and instruments (+3,000).

AVERAGE WEEKLY GROSS DOLLAR EARNINGS OF PRODUCTION WORKERS IN NEW JERSEY

Data Notes

Standard errors can be used to construct confidence intervals around each sample estimate. A 90% confidence interval means that, if repeated samples were drawn from the same population, the interval of plus or minus 1.645 standard error around each sample estimate would contain, in 9 out of 10 cases, the true value based on a complete census of the population.

The standard errors and coefficients of variation are developed on the basis of past observed variation in New Jersey's sample data. They cannot be applied to seasonally adjusted data because a source of variation, namely seasonal patterns, have already been eliminated by the seasonal adjustment procedure.

Standard errors (S.E.) and coefficient of variation (C.V.) for all years are based on 1985 CPS sample parameters.
